Kevin Christopher

Software Developer II | React.js, scss
Sangre Grande, Sangre Grande, Trinidad and Tobago

Summary

My name is Kevin Christopher. I have been a professional software developer for about five years, having earned a Master of Science degree with a double major in Information Technology and Environmental Science from the University of the West Indies.

Since September 2019, I have been working as a software developer, where I have developed and honed skills in Agile methodologies, Scrum, Go (a programming language developed by Google), Python, Vue, and Terraform.

One of my key strengths is my ability to quickly learn and adapt to new programming languages and technologies. This adaptability has enabled me to contribute significantly to projects and stay current with evolving industry trends. Recently, I have been expanding my knowledge by learning React, and I built a blog from scratch to document and share the process, including how to build and host it for free.

In my role as a Software Developer Level 2, I have had the opportunity to lead small teams through the full software development lifecycle, from planning and execution to deployment and maintenance. This experience has deepened my understanding of complex projects and technologies.

Throughout my career, I have had the privilege of collaborating with cross-functional teams, leveraging Agile methodologies to drive successful outcomes.

I am always eager to connect with like-minded professionals, share insights, and explore opportunities for collaboration. If you are interested in leveraging technology to make a positive impact, I would love to connect.
